Further structures of the conformal powers of the Dirac operator

Matthias Fischmann (HU Berlin)

09.11.2011

It is known that on a spin manifold there exist conformal powers of the Dirac operator. Quite few examples are known. But these examples provide us with a new point of view to look at these operators. In my talk I will present how this new structure works for the lower examples. This is a jointed work with Andreas Juhl (Uppsala University).
