

Contents

1	Sets, Structures, Numbers	1
1.1	Sets and Algebraic Structures	1
1.2	The Real Numbers	6
1.3	Natural Numbers, Rational Numbers, and Real Numbers	10
1.4	Roots	18
1.5	Representations of the Real Numbers	20
1.6	Mappings and Numerosity of Sets	23
1.7	Linear Spaces	34
1.8	Complex Numbers	38
	Problems for Chapter 1	43
2	Metric Spaces	47
2.1	Introducing Metric Spaces	47
2.2	Open and Closed Sets	50
2.3	Convergent Sequences	53
2.4	Banach's Fixed Point Theorem	58
2.5	Compactness	62
2.6	Connectedness	69
2.7	Product Metric Spaces	71
2.8	Sequences in \mathbb{R}	75
2.9	Sequences in the Euclidean Space \mathbb{R}^m	84
2.10	Infinite Series	85
2.10.1	Rearrangements	95
2.11	Power Series and Elementary Functions	102
2.11.1	Power Series	102
2.11.2	Elementary Functions	104
	Problems for Chapter 2	116

3	Continuous Functions in Metric Spaces	119
3.1	Introducing Continuous Mappings	119
3.2	Properties of Continuous Functions	126
3.3	Semicontinuous Functions	132
3.4	Variations of Continuity	135
3.5	Continuous Continuations	138
3.6	Continuous Functions over \mathbb{R}	142
3.7	Functional Equations	148
	Problems for Chapter 3	155
4	Linear Normed Spaces, Linear Operators	157
4.1	Linear Normed Spaces	157
4.2	Spaces of Continuous Functions	167
4.3	The Arzelà–Ascoli Theorem	176
4.4	Linear Bounded Operators	179
4.5	The Space $L(X_1, X_2)$	182
4.6	The Banach–Steinhaus Theorem	187
4.7	Invertible Linear Operators	190
4.8	Compact Operators	196
	Problems for Chapter 4	198
5	The Differential Calculus	201
5.1	Real-Valued Functions of a Single Real Variable	201
5.1.1	Mean Value Theorems	208
5.1.2	Derivatives of Power Series	213
5.1.3	The Graph of the Sine Function and of the Cosine Function	226
5.1.4	Taylor’s Theorem	233
5.2	The Fréchet Derivative and Partial Derivatives	239
5.2.1	Directional Derivatives, Partial Derivatives, and Fréchet Derivatives	242
5.2.2	Criteria	247
5.2.3	Higher-Order Partial Derivatives	250
5.2.4	The Chain Rule	253
5.2.5	Generalized Mean Value Theorems	258
5.2.6	Taylor’s Theorem Generalized	263
5.2.7	A Linear Unbounded Operator	266
	Problems for Chapter 5	267
6	Applications of the Differential Calculus	269
6.1	Numerical Solutions of Nonlinear Systems of Equations	269
6.1.1	Newton-Like Methods	271
6.1.2	Solving Systems of Linear Equations	284
6.1.3	Quasi-Newton Methods	293
6.2	Solving Extremal Problems	296

6.2.1	Necessary Optimality Conditions	296
6.2.2	Convex Sets and Convex Functions	299
6.2.3	Descending Iterative Methods	305
6.3	Implicit Functions	315
6.4	Continuations	328
	Problems for Chapter 6	336
7	The Integral Calculus	337
7.1	The Indefinite Integral	337
7.1.1	Antiderivatives for Rational Functions	342
7.2	The Definite Riemann Integral	351
7.2.1	The Jordan Measure	367
7.2.2	Fubini’s Theorem	373
7.2.3	Riemann Integral and Antiderivative	380
7.3	Curves, Arc Length, and Angles	389
7.3.1	Complex Roots	397
7.4	Improper Integrals	399
7.4.1	The Gamma Function	403
	Problems for Chapter 7	419
8	Linear Integral Operators	421
8.1	Introducing Integral Operators	421
8.2	Fredholm Integral Equations of the Second Kind	423
8.3	Fredholm Integral Equations of the First Kind	426
	Problems for Chapter 8	427
9	Inner Product Spaces	429
9.1	Introducing Inner Product Spaces	429
9.2	Fourier Series	437
	Problems for Chapter 9	446
10	Approximative Representation of Functions	447
10.1	Best Approximation	447
10.2	Least Squares Approximation with Polynomials	453
10.3	Uniform Approximation with Polynomials	458
10.4	The Stone–Weierstrass Theorem	463
10.5	Back to Trigonometric Fourier Series	467
10.6	Interpolation with Polynomials	471
10.7	Approximation and Interpolation with Splines	488
10.7.1	B-Splines and Spline Spaces	489
10.7.2	Interpolation with Splines	500
10.8	Numerical Integration	510
10.9	Richardson Extrapolation and Romberg Integration	519
	Problems for Chapter 10	523

11 Ordinary Differential Equations	525
11.1 Introduction	525
11.2 Initial Value Problems for Ordinary Differential Equations . . .	527
11.2.1 Continuation Theorems	537
11.3 Initial Value Problems for Linear Systems of Differential Equations	549
11.4 Further Common Types of Ordinary Differential Equations . .	577
Problems for Chapter 11	592
12 Discretization of Operator Equations	595
12.1 Discrete Approximation of Metric Spaces and of Operators . .	596
12.2 Collectively Compact Operator Approximations	602
12.3 Quadrature Rules for Fredholm Integral Equations of the Second Kind	606
Problems for Chapter 12	613
13 Numerical Solution of Ordinary Differential Equations	615
13.1 Integration Methods for Ordinary Differential Equations	616
13.2 Consistency, Stability, and Convergence of Integration Methods	627
13.3 One-Step Methods	630
13.4 Runge–Kutta Methods	637
13.5 Linear Multistep Methods	650
13.6 Asymptotic Behavior of Integration Methods and Stiff Differential Equations	662
Problems for Chapter 13	673
References	675
Subject Index	685
